## Windows Vista and Internet for CHILDREN

It is generally assumed that children growing up with computers automatically learn how to use them. Research has shown however, that for the majority of children their computer knowledge is very limited. It is true that the basics of chatting with Windows Live Messenger is something they pick up readily from their peers. But performing basic tasks like saving a file and later being able to find the file on the hard drive for instance, is often lacking. It was also found that children have very little knowledge of internet safety and privacy concerns.

This practical book addresses these issues. Each subject is carefully presented in a visual, step by step fashion and takes into account the existing know-how and interests of the child. Every single step is accompanied by full colored illustrations. This makes the book enjoyable and easy to follow. Special attention is given to internet safety and privacy issues.

**Author: Studio Visual Steps**

ISBN: 978 90 5905 056 3

Book type: Paperback

Nr of pages: 208 pages

Price: US \$19.95, Canada \$21.95

Companion website: [www.studiovisualsteps.com](http://www.studiovisualsteps.com)
